

## Biancone

This stone, which is characteristic of Feltrino, the fertile hilly area to the east of Belluno, is used for the construction and facing of internal walls. Pure biancone is renowned for its malleability and the way it behaves when sculpted. The pure white colour of this material gives a sensation of elegance and lightness which will illuminate the surrounding space.

### DESCRIPTION:

A type of limestone known as "biancone".

### TYPE:

"Opus incertum" slabs with finished natural cleft face.

### SIZE:
