

ECO 301

Honed Paglierino

VERA PIETRA NATURALE

A luxury material, ECO 301 - HONED PAGLIERINO allows "roman-style" mosaic laying techniques that enhance both interiors and external home areas. The wall surface can be created with a dry butt technique for a sophisticated and stylish result or, alternatively, with visible mortaring that highlights the product's natural attributes, adding visual depth to the final effect.

In this product selection each slab is hand-split butt edged making installation to create walls, cladding, fireplaces, columns and corner features extremely simple.
